## **DISCLAIMER**

Trading in the Boom and Crash market is a challenging opportunity where above average Returns are available to educate and experienced investors who are willing to take Above average risk. However, before deciding to participate in Forex trading, you Should carefully consider your investment objectives, level of experience and risk Appetite. Most importantly, do not invest money you cannot afford to lose.

There is considerable exposure to risk in any foreign exchange transaction. Any Transaction involving currencies involves risks including, but not limited to, the Potential for changing political and/or economic conditions that may substantially Affect the price or liquidity of a currency.

Moreover, the leveraged nature of FX trading means that any market movement will Have an equally proportional effect on your deposited funds. This may work against You as well as for you. The possibility exists that you could sustain a total loss of Initial margin funds and be required to deposit additional funds to maintain your Position. If you fail to meet any margin call within the time prescribed, your position Will be liquidated, without prior notice to you, and you will be responsible for any Resulting losses. Investors may lower their exposure to risk by employing proper risk Management practices.

## INTRODUCTION

Trading boom and crash is just like trading any other indices. However the nature of boom and crash is a bit different from any other indices like vix 75, step indices. The thing about the family of boom and crash is it is mostly traded in one minute time frame. These indices are mostly traded using strategies and tools that will help you to catch the spikes as they are the most important and profitable .they give you profits in a matter of minutes than other indices and currencies, it will be just like trading events everyday like NFP.

BOOM AND CRASH can be traded using price action as well but it will need the aid of tools to help and catch spikes. This strategy will help you to make profit consistently and to be honest with you forex is not a win win type of business they are loses that are incurred but the main goal in forex is to have a better winning percentage than that of your loses. Also in forex they is no 100% strategy ... but if you follow this strategy you are guaranteed that 80% of your trades will make you profits.

Boom is for catching buy spikes and crash we always catch sell spikes whenever the spikes appear we need to catch them. We don't buy crash and sell boom. We only sell crash and buy boom.

Boom 1 000 and crash 1000 has a tendency of continuing above 10 and below 90 respectively. This happens when the price has just lifted from a strong support in terms of boom 1000and also if the price is coming from a strong resistance... crash 1000 will also travel above 90 and avoiding spiking early whilst it has reached our sell area. The price will always spike after it has reached the spiking levels. When the support and the resistance is very strong at which the price will be lifting from which can be checked in higher time frames and see if the market is on a strong support or resistance then you stay away from such a trade and wait for the perfect setups an when market I going to our direction ...then its game up ...we make money.

## TOOLS

**a. Relative strength index.**

1. set to period 14 apply to close
2. levels must be 90,70,30.10

**b. 200 exponential moving average.**

**c. 50 simple moving average.**

**d. 800 moving average.**

## Uses

**200 EMA**-used as resistance when price is on down trend or support when price is on the uptrend.

Also used to show trend direction. When candles are below the 200 EMA it shows downtrend when they are above it shows that price is on uptrend. When the EMA is cutting between the candles the market then the price is ranging.

**50 SMA**- used as medium resistance when price is on down trend or support when price is on the uptrend.

Also used to show trend direction. When candles are below the 200 EMA it shows downtrend when they are above it shows that price is on uptrend. When the EMA is cutting between the candles the market then the price is ranging.

**800 EMA**- used as **STRONG** resistance when price is on down trend or support when price is on the uptrend.

Also used to show trend direction. When candles are below the 200 EMA it shows downtrend when they are above it shows that price is on uptrend. When the EMA is cutting between the candles the market then the price is ranging.

**RSI**- used to give signals for entry such as if the price is at level 10 and 30 you buy and the levels are the level 70 and 90 you sell.

## HOW TO USE THE STRATEGY

### HOW TO BUY BOOM 1000 AND BOOM 500

The first thing is to draw your support and resistance in the 15 mins time frame and then after that we always turn to our strategy. The market will also find support and resistance at the 200 EMA hence for a buy these conditions should be met.

- When the price is below the 50 SMA look to buy when the RSI is at level 10.
- When market is ranging look for a buy opportunity at level 30 on the RSI.
- When price is near or above the 50 SMA look to buy when RSI is at level 30.
- When price reaches the 800 moving average you also look to buy.
- Always look to buy when price reaches level 30 and level 10.

### Examples

A buy on boom 500

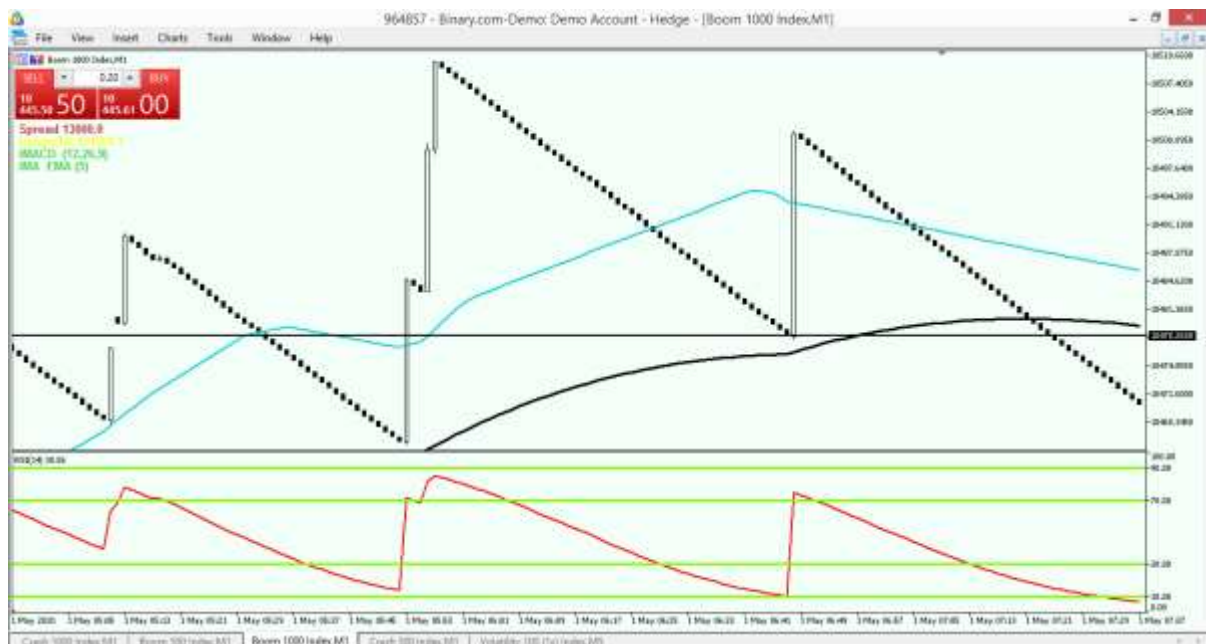

When the market is at the level 30 you enter a buy. Also when the price is on the strong support the 800 EMA in red we confirm with the RSI and then enter a buy then we catch our spike and make profit.

A buy on boom 1000

When price reaches level 10 and or 30 we consider the terms at the top and then we enter our trades catch spikes and make money.

Always make sure to consider the conditions we stated that should be followed when entering a buy.

When the price reached level ten look how it spiked and went upwards and made profits.

## How to sell crash 1000 and crash 500

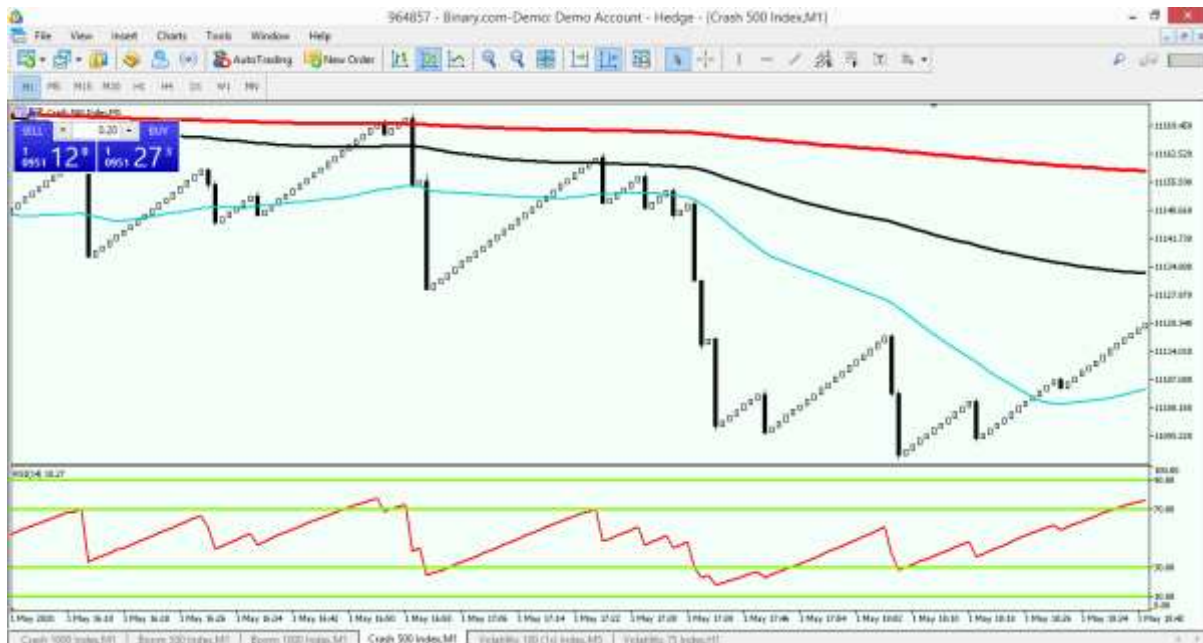

The first thing is to draw your support and resistance in the 15 mins time frame and the 1 hour time frame. After that we always turn to our strategy. The market will also find support and resistance at the 200 EMA hence for a sell these conditions should be met.

- When the price is below the 50 SMA look to sell when the RIS is at level 70.
- When market is ranging look for a sell opportunity at level 70 on the RSI.
- When price is near or above the 50 SMA look to sell when RSI is at level 90.
- When price reaches the 800 moving average you also look to sell.
- When price is above the 200 EMA you look to sell at level 90.
- When the price is above both EMA it will be on a strong uptrend you might wanna stay away from the charts at that time.

### Examples

This is a sell on crash 1000. when the price reaches level 90 you look to sell and when price is at level 70 on the RSI you also look to enter a sell

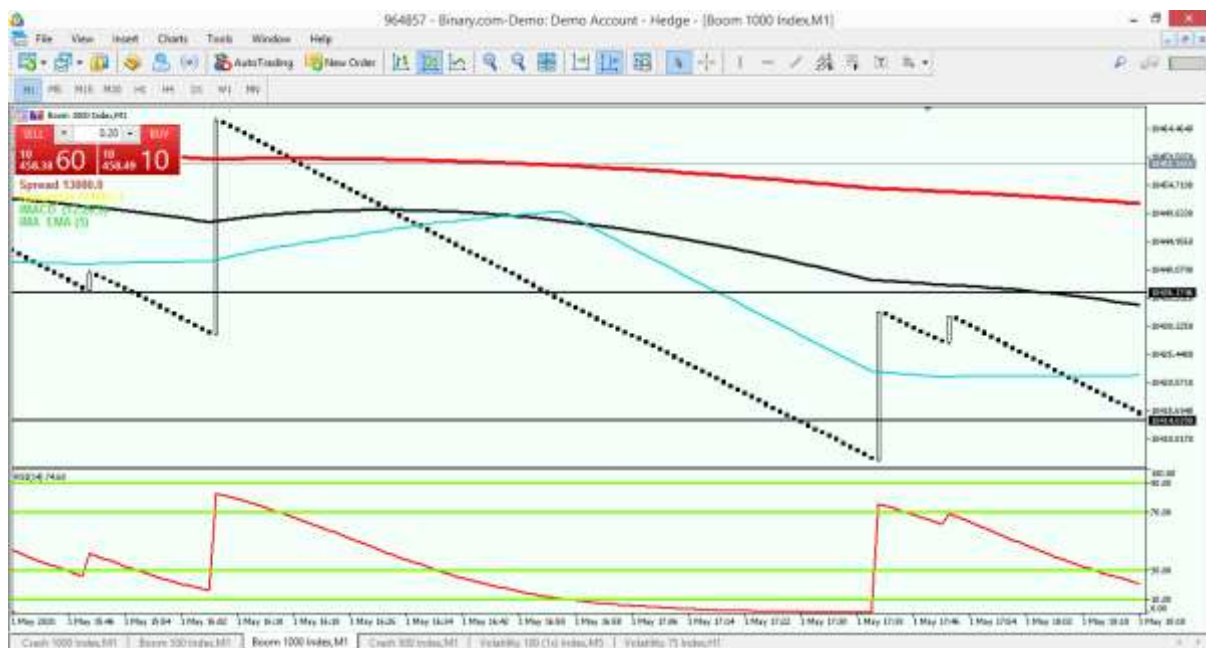

When the price reaches the red moving average(800) it faced rejection hence resistance and price had reached the 70 level.... that was a clear sell right there..Then it also reached the black moving average (200) and it had reached level 70.. a sell signal again.

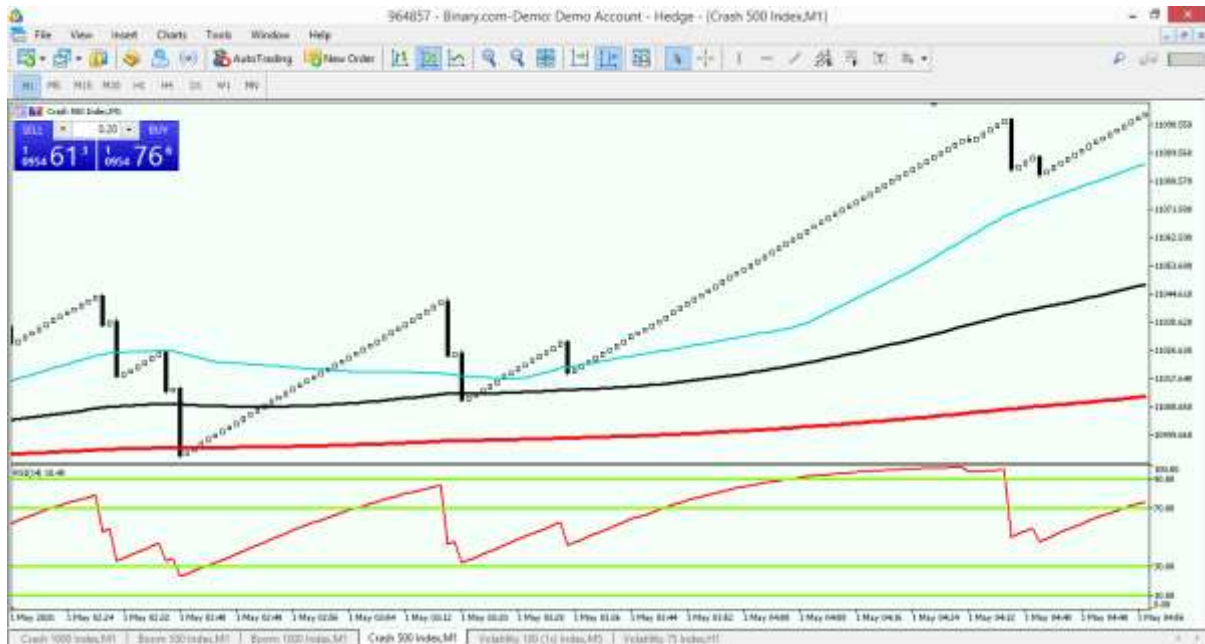

If you follow the trading plan you will make profits and if you apply proper risk management you will make profits.

## NOTE

We look to sell crash and buy boom. When you want to sell crash you need to visit the higher time frames like the 1 hr and see the direction of the market if the market is on a strong uptrend you might want to wait a little and wait for it to start retracing and find opportunities on the strategy. Same applies to boom we always buy boom but before you start buying and using the strategy you want to make sure that the market is not on a strong downtrend.. The strategy is most profitable if you follow the rules of forex and price action which is.. going with the trend so always look to sell crash on a downtrend and buy boom on an uptrend. Look at the charts below.

This is when the market is on a strong sell on the boom market .it will pull under the 10<sup>th</sup> level while you expect it to spike... so if you buy against the trend and this starts showing on your RSI and probably you will start blaming the strategy whilst you were supposed to follow the trend and make money .always remember the trend is your friend.

This is an example of crash on a strong uptrend. See how it travels above 90 .hence you should always go with the trend.

This strategy goes well when you are following the trend not when you are going against it.

**Hence avoid buying boom at resistance levels and selling crash on support levels.**
